Why connect the ATREA air handling unit with the aMotion control unit to the internet

Atrea®

Ventilation with heat recovery

aM

NEW ITEM

1 Possibility of regular SW updates free of charge

- ATREA will add new interesting features for optimizing operation and energy savings (weather forecasts, self-learning modes, etc.)
- In the new SW versions, identified gaps and problems are removed
- The customer gets the latest features for the entire life of the product free of charge
- This feature can be disabled or paused by the user at any time

2 Possibility of remote management

- In case of problems, the user can make the unit available to a service technician or the manufacturer
- It allows a quick diagnostic of the problem
- It allows to eliminate a possible problem without the need for a technician which saves time and money for the user

3 Possibility of remote user control

- Thanks to the internet connection, the users can access their unit from anywhere in the world
- It allows to use a mobile application in the future and control the unit from a phone

aDot   aTouch

4 Possibility to use the management application

- If you have more ATREA units with the aMotion control in your facility, you will soon get the opportunity to manage them in bulk
- Suitable for facility wardens, school caretakers and facility managers

The connection of the new aMotion control to the ATREA cloud is solved using the most advanced secure systems protecting attacks from hackers.

Also, the data are not only stored on secure servers, they are not personalized at all - i.e. linked to a specific user name or address. Everything is done on the basis of separate databases according to serial numbers.
