

aManager

intelligent management of aMotion ventilation units for facility managers and standard users

Atrea[®]
Leader in ventilation and heat recovery

All units under control from anywhere
– clearly, simply, and always up to date.
Colour notification of all malfunctions.

aM

1 Automation and scenarios

- ATREA aManager enables bulk control of units using scenarios.
- Simply select a group of devices and choose the desired action.
- User can switch the building to a different mode with a single click.
- The facility manager prepares complex scenarios for various situations.

2 Access sharing and management

- Team collaboration is essential. aManager enables system sharing and access control.
- An experienced administrator sets up the structure and scenarios.
- Others use them according to their competencies.

3 Simple and clear monitoring

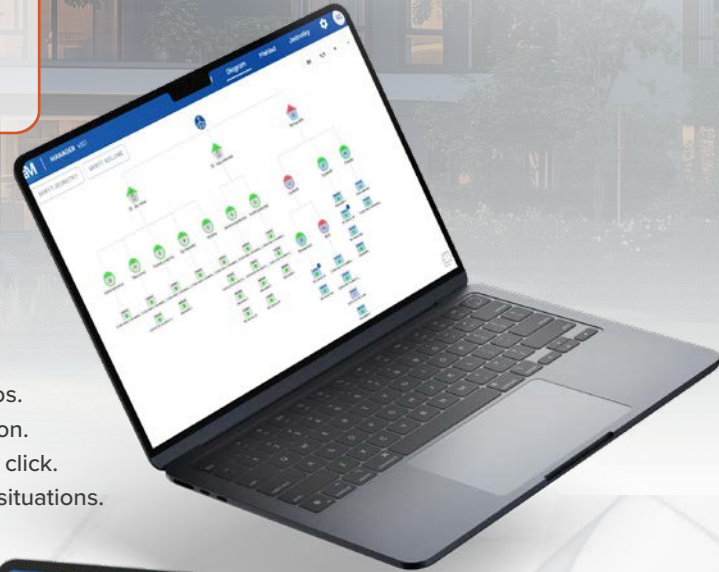

- Enables individual display of all devices in the building according to the administrator's needs.
- The entire ventilation system on one screen.
- Access the web interface of each unit with a single click.
- Various display options.

4 Smart real-time communication

- Integrated chat simplifies problem-solving and communication between users of different levels.

5 Control, clarity, and comfort for FREE! Additionally, you get:

- Automatic software updates
- Mobile application
- Remote service tool

Tree structure
and tabular data
ensure clarity.

The connection of the new aMotion control system to the ATREA cloud is resolved using state-of-the-art secured systems protecting communication against hackers.

Data is stored on secure servers and is not personalized – i.e. not linked to a specific name or user address. Everything operates based on separate databases according to serial numbers.
